#### BEFORE YOU DIVIDE: WHAT YOU NEED TO KNOW

Plant name	Sprino		fall	clumbe	Spreads	Tips for successful dividing
<b>Bugleweed</b> Ajuga reptans	<b>~</b>	~	<b>v</b>		~	Spreads by runners and roots easily; will root most quickly in spring and fall but can be divided any time of year
Butterfly weed Asclepias tuberosa	~			~		Difficult to divide because of taproot; for best results, purchase new plants
<b>Campanula</b> Campanula spp.	~	~		~		Easy to divide; most are clump-forming, although some are spreader
<b>Catmint</b> Nepeta spp.	~			~		Divides easily; can also be divided after first flush of bloom if cut back and carefully watered
<b>Columbine</b> Aquilegia hybrids			~	~		Doesn't like to be disturbed; do in late summer to early fall if necessor reseeds easily so that may be a better way to get more plants
<b>Coral bells</b> Heuchera hybrids	~		~	~		Easy to divide; divide about every 3 years; discard old, woody central portion of clump
<b>Coreopsis</b> Coreopsis spp.	~	~		~		Roots easily; dividing every 2 to 3 years will keep plants alive longer as they tend to be short-lived if left undisturbed
<b>Daylily</b> Hemerocallis hybrids	~		~	~		Divides easily; make sure that each division has 2 or 3 shoots; will bloom better if divided regularly
<b>Delphinium</b> Delphinium spp.	~			~		Blooms best if divided down into small sections; regular division (every 2 to 3 years) will prolong plants' life
<b>Dianthus</b> Dianthus spp.	~			~		Divide every few years to extend plant life; tends to be short-lived if left undisturbed
European wild ginger Asarum europaeum	<b>~</b>		~		~	Easy to divide in spring or early fall; deep, fibrous roots smell like black pepper
Fall anemone Anemone spp.	~			~		Doesn't like to have main clump disturbed; sends out underground runners, so dig small new plants around the edges to transplant
<b>False indigo</b> Baptisia australis	<b>V</b>			~		Difficult to divide because of taproot; for best results, purchase new plants; if you have to divide, dig deep to get entire root system
Feather reed grass Calamagrostis acutiflora		~		~		Divide in spring; lift entire clump and cut into sections
<b>Garden mum</b> Chrysanthemum hybrids	<b>V</b>			~		Easy to divide; divide every 2 to 3 years to keep plants blooming and vigorous; discard dead central portion
<b>Gas plant</b> Dictamnus spp.	~			~		Difficult to divide; for best results, purchase new plants
<b>Gaura</b> Gaura spp.	~			~		Difficult to divide because of taproot; better to purchase new plants
<b>Geranium, hardy</b> Geranium spp.	~		~	~		Most species rarely need dividing, but divides easily; most can be pulled apart by hand
<b>Geum</b> Geum spp.	<b>~</b>		~	~		Divide in spring or late summer to early fall if needed; tends to be short-lived so does not need frequent division
<b>Globe thistle</b> Echinops ritro	~			~		Reseeds; new seedlings can be transplanted; will often flower in summer after spring division; for best success, divide young plant:
<b>Goat's beard</b> Aruncus dioicus	~			~		Rarely needs to be divided; tough roots make dividing difficult; leave plenty of room around new transplants because the plant gets large
<b>Goldenrod</b> Solidago spp.	~		~	~		Divide every 3 to 5 years to keep plants vigorous
<b>Hellebore</b> Helleborus spp.	~			~		Rarely needs to be divided; if you do divide, do it in early spring whe plants are in bloom or right after they stop flowering

### BEFORE YOU DIVIDE: WHAT YOU NEED TO KNOW

Plant name	Sprimo	Summer	fall	clumbo	<sup>5</sup> preads	Tips for successful dividing
<b>Hosta</b> Hosta hybrids	~	~	~	~		Easy to divide in early spring when foliage is emerging; dividing large clumps later won't harm plants but leaves them lopsided for the summer
Japanese painted fern Athyrium niponicum pictum	~		~	~		Rarely needs to be divided, so divide only for new plants, every 7 to 8 years
Joe-Pye weed Eupatorium purpureum	~		~	~		Divide in early spring for easy handling; for fall division, cut back flowers; may need a saw or hatchet to cut apart woody crown
Lady's mantle Alchemilla mollis	~		~	~		Divide in spring or fall; easiest in early spring as leaves begin to emerge; doesn't need frequent division
Lily-of-the-valley Convallaria majalis	~				~	Divide in early spring or after blooming; spreads rapidly so divide often to establish new areas of ground cover
<b>Lilyturf</b> Liriope spicata	~				~	Spreads rapidly by underground stolons, so divide often for new plants; can go without division when used as a ground cover
Maiden grass Miscanthus spp.	~			~		Divide in early spring; use a hatchet or saw to cut clump apart; can dig whole clump to divide or chop out segments
Monkshood Aconitum spp.	~		~	~		Seldom needs to be divided; all parts of the plant are poisonous, so wear gloves and handle with care
<b>Obedient plant</b> Physostegia virginiana	~				~	Divides and roots easily; spreads rapidly so can be divided often (every 1 to 3 years) for more plants or to thin the bed out
<b>Oriental poppy</b> Papaver orientale		~		~		Has taproot, so difficult to divide; but if necessary, divide in early summer after flowering; can take root cuttings for more plants
<b>Peony</b> Paeonia spp.		~	~	~		Rarely needs to be divided; make sure each division has at least 3 eyes (growing points); may take several years to bloom after dividing
Phlox, tall garden Phlox paniculata	~		~	~		Easy to divide; regular division keeps clumps smaller, less prone to powdery mildew; discard woody, dead center of clump
<b>Plumbago</b> Ceratostigma plumbaginoides	~				~	In good growing conditions, can spread rapidly, so divide often for new plants and to keep under control
Purple coneflower Echinacea purpurea	~		~	~		Easy to divide; divide every 4 to 5 years for healthier plants; reseeds, and seedlings are easy to transplant
<b>Russian sage</b> Perovskia atriplicifolia				~		Very difficult to divide because of taproot; for best results, purchase new plants
<b>Salvia</b> Salvia spp.	~		~	~		Divide every 5 or 6 years or when plant dies out in the center
Sedum (tall) Sedum spp.	~		~	~		Can be divided into summer; easiest to divide in spring when foliage is still small
<b>Shasta daisy</b> Leucanthemum xsuperbum	~		<b>v</b>	~		Divide every 3 or 4 years to keep plants vigorous; discard woody central portion of clump; may need two garden forks to pry clump apart
<b>Sneezeweed</b> Helenium hybrids	~			~		Divide in early spring when foliage is just emerging; dividing every 3 or 4 years will keep plants vigorous and blooming heavily
Sunflower, perennial Helianthus spp.	~			~		Divide every 3 to 4 years; most of these plants are large, so divide early in spring while they're still small enough to handle
<b>Turtlehead</b> Chelone lyonii	~		~	~		Divide about every 4 years or as needed; if you divide in fall, wait until the plant is done flowering
<b>Veronica</b> Veronica spicata	~		<b>v</b>	~		Easy to divide; dividing keeps clumps smaller so they don't fall apart in the middle
<b>Yarrow</b> Achillea spp.	~	~			~	Easy to divide; most types spread quickly so divide every 2 to 3 years; some form clumps
